

Wall Panel X

Wired PoE

Green-GO Wall Panel Speaker version is a panel-mounted version of the Green-GO Beltpack with direct access to three communication channels (either a single direct user or a group.) In addition there is A Speaker with a separate Engine to witch a independent set of users and groups can be assigned. For example program audio and stage manager announcements.

The Wall Panel X has a large color TFT touch display which also acts as a cue acknowledgement button. The display wil show textual information and colored popups for cue's and calls. On the front of the Wall Panel is a rotary encoder which acts as a master volume control for the speaker and when pressed allows for setup of the device. Together with 3 RGB backlight push buttons for direct talk acces to the headset channels.
